### CREATIVE DESIGN

The super space saving design is made from UNI-BEAM construction. This provides the ultimate in bike security by providing commercial strength tubing that allows U-Lock locking. The UNI-BEAM design provides a flowing pattern that is aesthetically pleasing as well.

Designed to fit a bike every 16 inches in a vertical configuration. You can fit the most bikes in the smallest footprint possible utilizing the horizontal hook offset. In most cases the bikes will not have handle bar interference using the standard hook location, with the horizontal offset hook, the chances for handlebar interference becomes almost zero.

NO-LIFT design patterns are utilized to eliminate bike lifting in most cases. Hook height allows bikes to be rolled on their back tire, preventing the biker from lifting the entire bike off the ground. This helps protect your client from potential liability issues. This also minimizes the load on the bike tire, which minimizes the potential of tire damage.

The UNI-BEAM locking dimensions are optimized to fit the sweet spot on most bikes for locking.

**Patent Pending**

# Vertical Flow Rack

## Super Space Saver

- NO-LIFT design prevents injury/liability
- UNI-BEAM construction for bike security
- Flowing UNI-BEAM design is attractive & aesthetically pleasing
- Super Space Saving Design fits the most bikes per square foot of available space
- No assembly required, contractors can install quickly, reducing project costs

# No-Lift Design

Tire never leaves the ground. Helps prevent back injuries.

Pull Back on Handlebars using seat for leverage

Push bottom tire against wheel stop or wall first. Then put top tire on the hook.

## U-Lock Compatible

## Typical Spacing

## Specifications

Steel Tubing, 1.5" and 2" diameter

Finish Options:

Standard:

Powder Coat Black Hammered  
or  
Galvanized

Other colors available. Please see color options [bikerack.com/colors](http://bikerack.com/colors)

Stainless Steel available

Dimensions are reference only. Stainless steel will vary due to greater springback. Use actual parts for installation
